Dear Milt:

We have discussed film splicing techniques with you on several occasions. Last week a sample film containing several types of splices was submitted for your study.

In order that we might submit an estimate, as has been previously requested, for a field splicing machine or fixture, we would appreciate very much the information as to which splice is the most satisfactory for operation in your configuration.

If there does not appear to be a definite superiority of one splice over another, we will take the position of recommending the device most satisfactory from our own operational experience.
